

Figure (a) Positive OTG sites: average amino-acid composition around central T, n=182

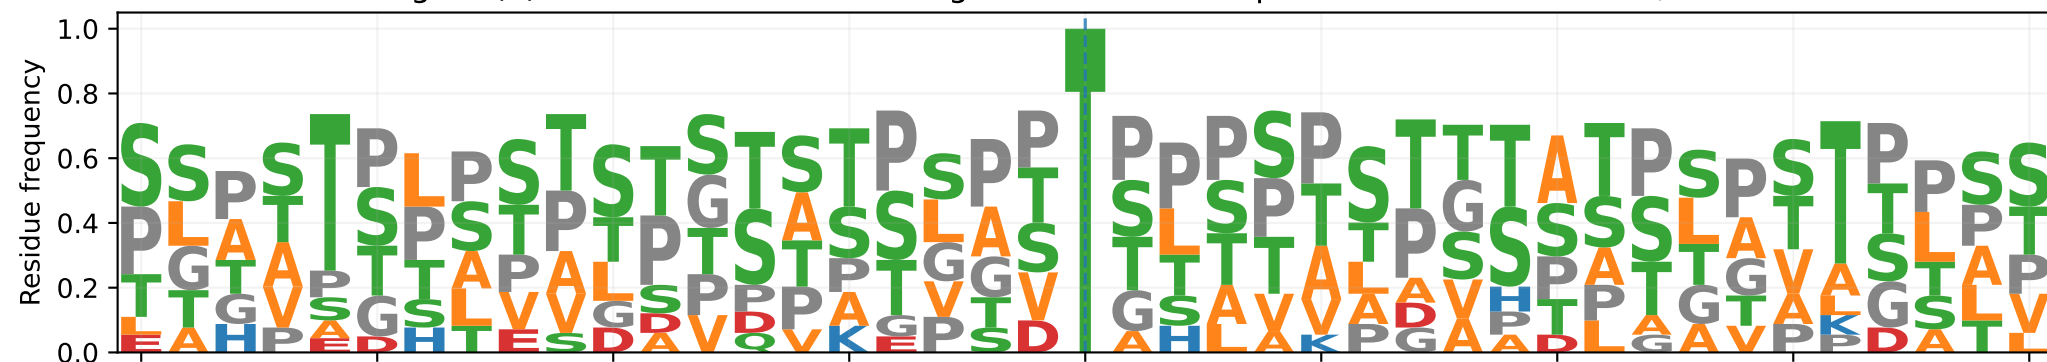

Figure (b) Negative non-OTG sites: average amino-acid composition around central T, n=991

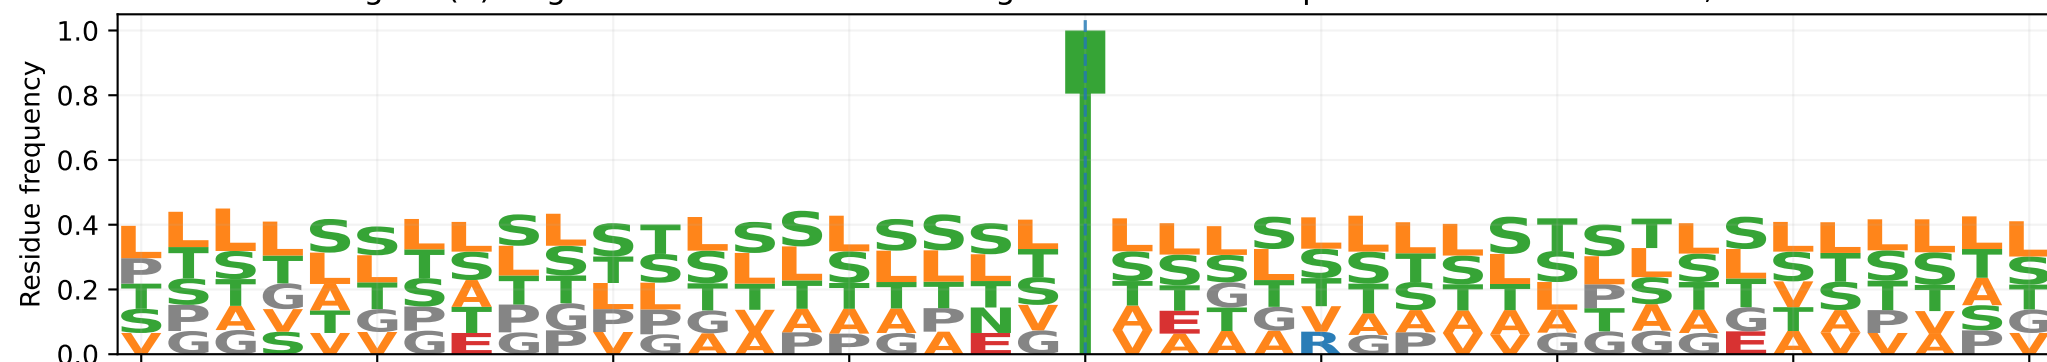

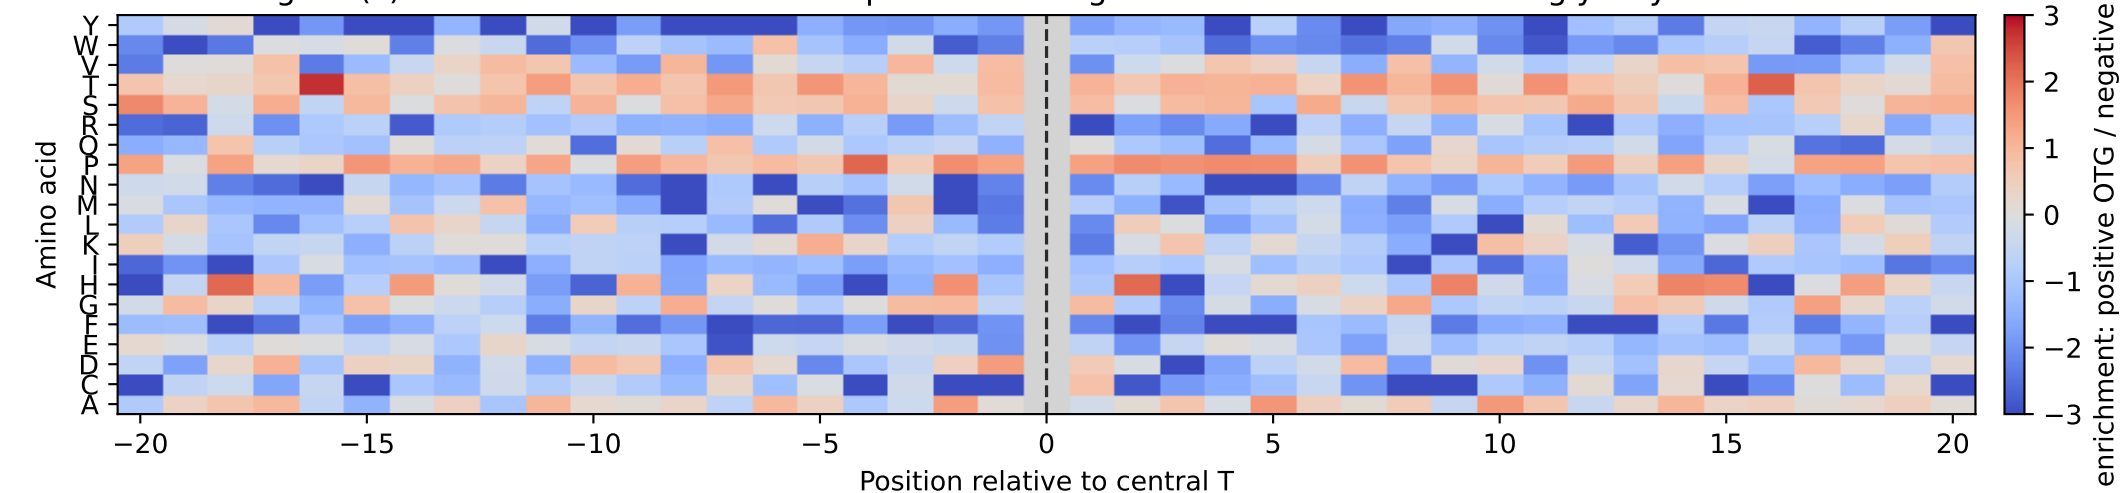

Figure (c) Residue enrichment landscape surrounding human O-linked threonine glycosylation sites

Center position is fixed as T by design; heatmap center column is masked to highlight surrounding residue preferences.

log2 enrichment: positive OTG / negative non-OTG
